

# Simple to implement team evaluations that build collaboration skills.

## Evaluations that integrate with your LMS

With Peerceptiv, instructors can implement pre-built or custom peer evaluations that integrate in less than 15 minutes. Users never have to leave the LMS interface with single-sign-on for students and instructors. Anonymous qualitative and/or quantitative evaluations are fully supported.

## 360° evaluations

Students will see how their efforts are being recognized with multiple evaluation options, including: intra-group, self, instructor to students, and external partner to students. When students evaluate each other, they build collaboration skills that prepare them for the workplace.

## Deep learning analytics for instructors and students.

At the end of each team evaluation, students receive a full breakdown of how their peers evaluated their collaboration skills. The instructor results dashboard provides a complete picture of all evaluations and other interactions that occur during the assignment. Instructors can also track each group's performance as a whole. Student engagement metrics display how much each student participated in the activity.
