

Save Time, Enhance Learning: Peer Feedback Made Easy

Peerceptiv streamlines assignment management by automatically distributing submitted files for peer feedback and generating grades that are as valid and reliable as expert assessments. With seamless LMS integration and no spreadsheets to manage, Peerceptiv saves instructors hours of work. This one-pager highlights the most popular ways instructors are using Peerceptiv:

Writing Across The Disciplines

Peerceptiv was designed to improve student writing across all disciplines by facilitating structured peer feedback. As students review each other, they gain a deeper understanding of the course content while practicing critical thinking and communication.

Multimedia And Non-Writing Assignments

Enable authentic assessments in any size course. Students can submit various file types—such as videos, audio recordings, and images—directly into the platform, ensuring each student receives actionable, detailed feedback without a heavy grading burden for the instructor.

Graded Reading Responses

Students submit reflections on assigned course readings directly into Peerceptiv, which are then automatically distributed to peers for evaluation based on the instructor's rubric. After receiving feedback, students respond to multiple peers, promoting academic dialogue around the reading.

Live Presentation Review

Actively engage students in the audience and generate real-time data with rubric-based peer reviews for group or individual presentations. Students work through a guided rubric to provide actionable, detailed feedback to their peers as they watch along live or online.

Group Projects And Group Evaluations

Peerceptiv enhances group work through three key features, which can be utilized individually or combined to create a seamless group work experience tailored to the specific needs of any course.

Automatic Group Formation

Create a custom survey with multiple-choice, rank order, and calendar availability questions. Peerceptiv then automatically forms groups based on student responses and syncs them to the LMS, saving time and ensuring optimal grouping.

Group Project Peer Review

Multiply the benefits of traditional group work by assigning students to assess other groups' work individually. Promote critical analysis around course content and ensure groups receive diverse feedback from multiple reviewers.

Team Member Evaluation

Enable students to anonymously rate and comment on their team members' collaboration skills, providing valuable insights into individual contributions and enhancing overall team dynamics.

And More...

Turn any assignment into a collaborative learning experience. Learn more at peerceptiv.com

"Not only has Peerceptiv allowed me to easily provide meaningful student-to-student engagement for my large-enrollment online courses, but it has also made the grading process a breeze - what used to take me hours to do can now be done in minutes."

- Jill Reid, Associate Professor of Biology, Virginia Commonwealth University
